

RIVASHIELD

- Rinse the whole car thoroughly using a power washer, start at the dirtiest parts - wheel arches, wheels, body.
- Apply active foam to whole car using foam cannon and dedicated detergent with neutral pH, rinse thoroughly using a power washer.
- Wash the rims using brushes with specialized cleaning products.
- Handwash the car using a delicate glove and two buckets (one with warm water and shampoo and another with water to rinse the glove).
- Rinse the whole vehicle and dry using dedicated microfiber towels.
- While using a power washer remember to keep the gun at least 60cm away from elements protected with PPF because the high pressure can damage the film or cause adhesion problems
- It is not recommended to point the washer at film edges because it can cause water to get under the film and lift it.
- Before using any strong detergents make sure they do not damage the film by testing in a small invisible area.
- All contamination (bird dirt, mosquito etc.) should be removed as quickly as possible. Residue left on film for a longer time period can lead to colour fading or blurriness.
- It is not recommended to use automatic car washes.
- It is not recommended to wash the car in sun.
- Car can be safely washed using neutral pH products.
